

ABSTRACT OF THE DISCLOSURE

An eye shield device for a visor broadly includes an eye shield assembly and an attachment assembly for removably attaching the eye shield assembly to the visor. The
5 attachment assembly includes a pair of opposed support members, an eye shield mount for coupling the eye shield assembly to the attachment assembly for permitting pivotal movement of the eye shield assembly about a first axis, and a generally flexible band coupled with and spanning between the support members defining a visor-receiving slot between the band and the eye shield assembly.
